

Deliverables by Package

Priced per class-day of finished courseware. Core LMS delivers platform-neutral digital courseware; Instructor-Led adds trainer and learner materials; Courseware Publisher adds branding, editable source and advanced production. Every paid package includes full commercial rights and Courseware Editor access — the package determines which deliverables you receive, not whether the finished course can be used commercially.

DELIVERABLE	CORE LMS	INSTRUCTOR-LED	COURSEWARE PUBLISHER	PRIVATE CLIENT CATALOG

Local Environment Setup Package Requirements captured for any paid package; setup ZIP requires quote, voucher, agreement, or admin approval	Request / quote	Request / quote	Request / quote	Quote / custom

Courseware Editor & Rev workflow. Rev sets are regenerated from edited content and labeled separately; they bypass the original content audit and SME Technical Review, and the original audited deliverables remain available unchanged.

Self-paced eLearning. Selectable during the original purchase or after the base deliverables are complete. It reuses approved canonical course content and does not change the base package or add Courseware Publisher-only production features.

eLearning Import Package. One ZIP organizes shared PPTX, DOCX, PDF, media, and course-structure assets, then provides tool-specific folders for Storyline resources, Captivate 13 CSV assessment imports, and iSpring QuizMaker XLSX question imports, plus a current Intro Video set per module. It does not generate native proprietary authoring-project files, and not every shared file type imports directly into every tool.

Ownership & usage. Customers retain ownership of their original source materials and must use only content they own or are authorized to use, including for CourseRemaster™ uploads. Every paid package includes full commercial rights to generated courseware; Courseware Publisher is a production upgrade, not a rights upgrade.
